

## Set your Main Retail Pro Screen to be your Homepage January, 2013 Retail Pro v8

---

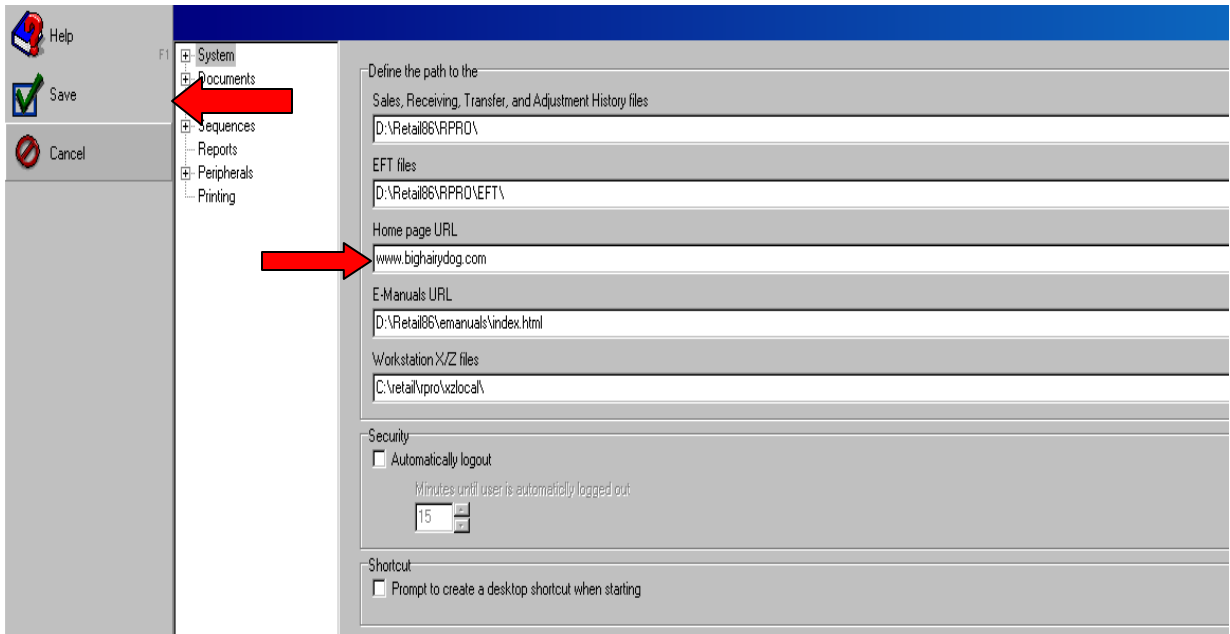

The main menu background of Retail Pro v8 is a web browser and can be set to show your store's web page instead of the Retail Pro graphic? It is very easy to adjust this setting, and will be covered in this Feature of the Month.

1. This feature must be set on each individual workstation. To assign the homepage, start at the main menu of Retail Pro and choose 'Options' from the top bar and then 'WS Preferences' from the sidebar.

(Note: you will need to be logged in as a user with the access rights to WS Preferences).

2. Once you are logged in with the proper access rights, look for the line that reads 'Home page URL' and change it to the address of your website.

3. Once your website address is in the Home page URL, click on 'Save' on the side menu. Your website should now display on the main screen of Retail Pro.
