

## Tag Designs for Items

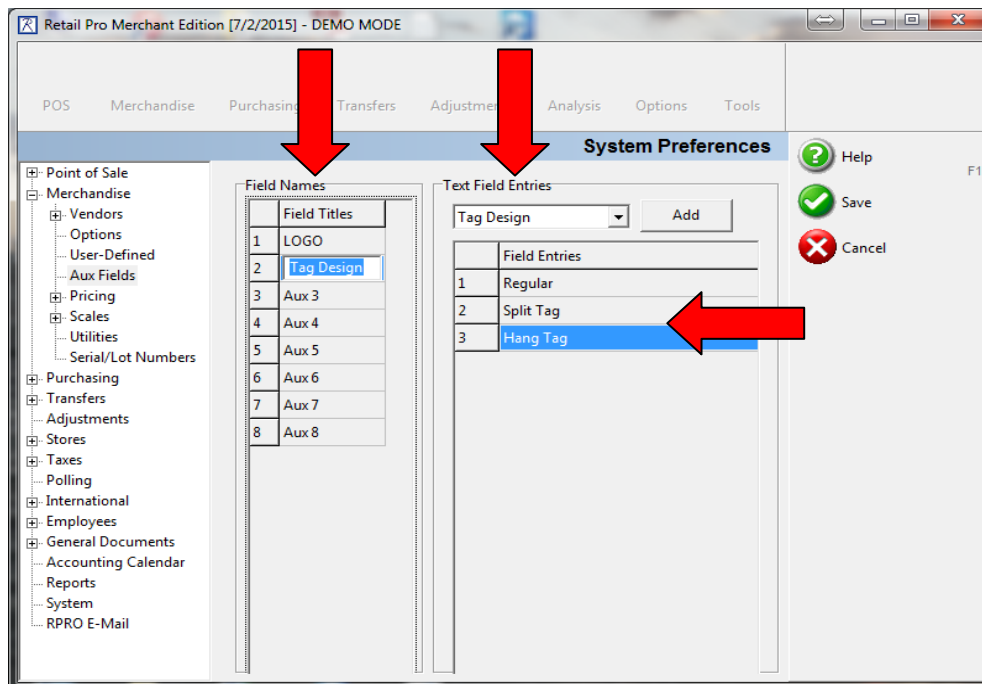

### Tag Designs for Items V8 August 2015

Tag Designs cannot be assigned to items in inventory in V8. A User Defined Field (UDF) or Aux field could be used to mimic this feature for filtering purposes. The exact same functionality will never exist in V8, but it could still increase productivity.

#### *Setup in System Preferences:*

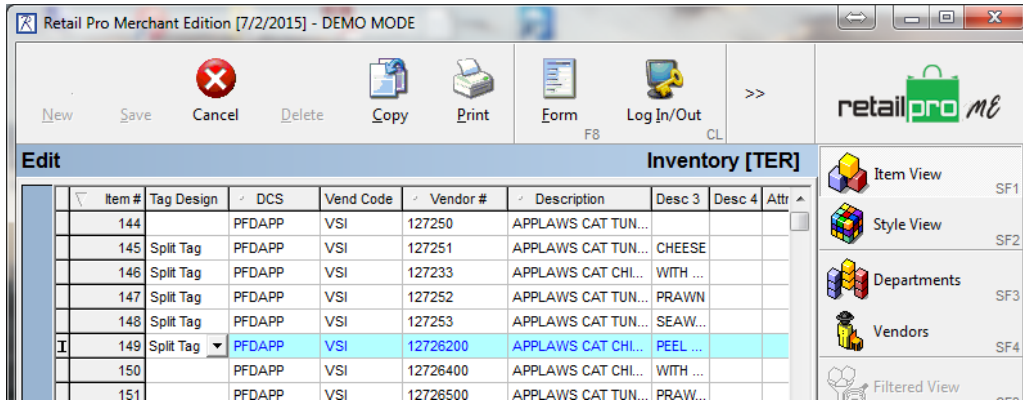

1. Select Options > System Preferences > Merchandise > User-Defined OR Aux Fields
2. Select and un-used field and define it as Tag Design
3. Select the new field in the Text Field Entries
4. Fill in the Tag Design Choices

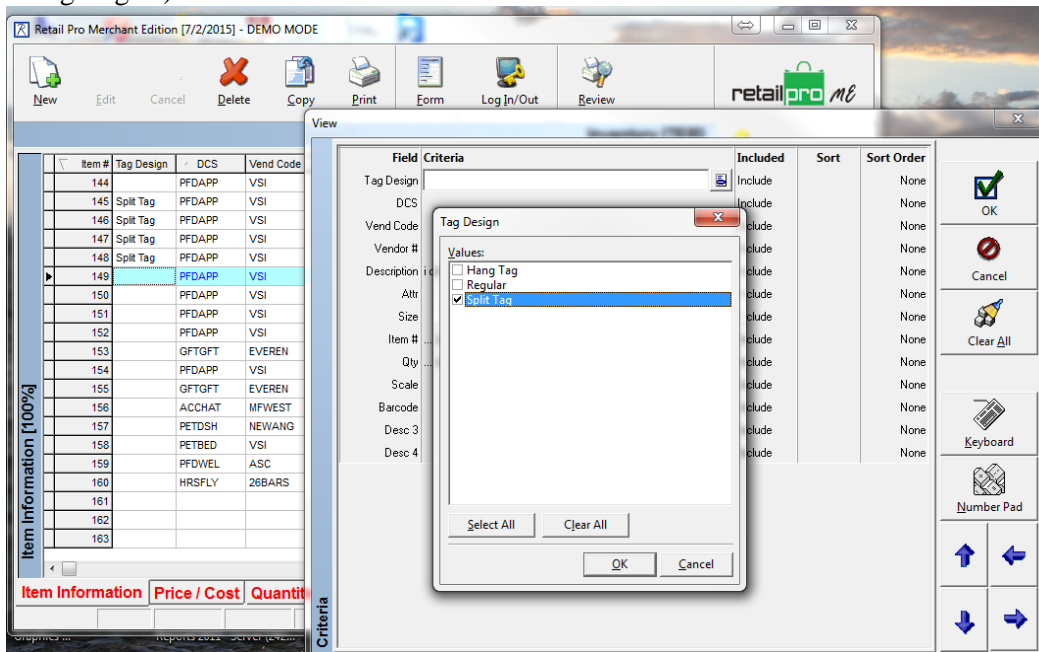

5. Save the settings
6. Select Merchandise > Inventory
7. Add the field to the screen (Requires screen design)

## Tag Designs for Items

8. Edit the field as needed

9. In the filtered view, add the field so that you can filter by it when printing tags (Requires Filter Design rights).

10. Print tags...
