Auto Lockout Security Feature Version 9

Ever worried to leave the register to go to the office for fear someone is going to walk in and click the “Open Drawer” button and get away with all your hard earned cash. There is a feature that will solve that problem. Below are the steps to activate this feature:

1. From the main menu, click on “Options” and then on the drop down menu, click “WS Preferences”.

- At the bottom of the next screen, you will see “Automatic Timeout” , and below that a check-box labeled “Automatically lock workstation”, as well as a number field labeled “Minutes until user is automatically logged out”. Here you can specify from 1 minute to 999 minutes. Remember to check the box to enable the feature.

3. Once you have specified the time for the system to log you out, click save and you will be returned to the main menu. Now, if there has been no activity for the number of minutes you specified, the login screen will appear.
