

Use Movelist to copy receipt –V8

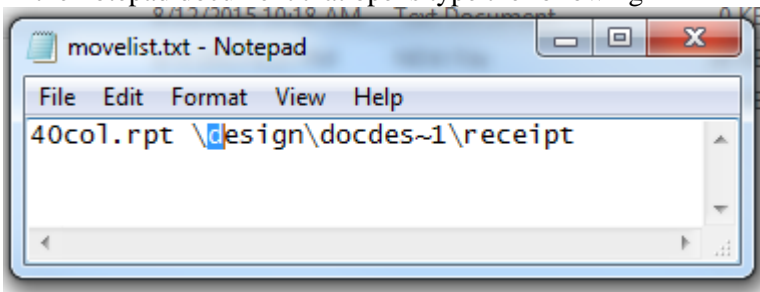

Use Movelist to copy a design to all your remote locations (V8 Advanced Feature)
September, 2015

In Version 8 Polling there is a feature to include files in the polling process to transfer a file to a folder at the remote. In this document we will go over how to send a receipt design (40col.rpt) to the remote stores automatically.

1. Find the path to your Retail Pro Folder in the bottom of your main screen (eg:D:\Retail8\Rpro)

2. In Windows Explorer navigate to that path and open the **DESIGN** folder.
3. Open the **DocDesigns** folder.
4. Open the **Receipt** folder.
5. Right Click on the file you want to send to the stores **40 Col.rpt**
6. Navigate to the Retail Pro Folder once again and open the **POLLING** folder.
7. Open the **BCAST** Folder and right click and paste the file we copied earlier.
8. Right click in the folder and choose NEW and TEXT Document, name the file movelist.txt
9. Right Click on **movelist.txt** and choose edit
10. In the notepad document that opens type the following

11. Click File then choose Save and close the window.

The next time you poll, that movelist.txt and design file will be copied to each remote set up in polling and transmitted to the store, then that file will be moved by the movelist.txt file to the receipt design folder. Any existing file with that name in the remote **WILL** be overwritten.
